Image Enhancement Playbook — Planning Doc

Status: Not executed — review before running any batch enhancement.

Goal

Make on-site photos look cleaner, sharper, and more premium without changing composition, subjects, colors, mood, or text in the images.

What NOT to do

- Do not run all images through generative AI image_edit — faces, food, and text can shift.
- Do not AI-enhance menu flyer graphics (menu-services-promo.jpg, menu-packages-flyer.jpg).
- Do not replace live files until before/after review is approved.

Recommended process

- 1. Backup originals to images/originals/
- 2. Tag each file: photo | graphic | face | text
- 3. Batch-enhance photos only with Sharp/ImageMagick (sharpen, denoise, mild contrast, web export)
- 4. Manual review — especially face shots and any readable text
- 5. Swap approved files in place (same filenames) and deploy

Priority tiers

- Tier 1: Hero + Services cards
- Tier 2: Experiences section
- Tier 3: Gallery + social proof

Skip or handle separately

- menu-services-promo.jpg — designed graphic
- menu-packages-flyer.jpg — designed graphic with pricing text
- photobooth-promo.jpg — illustration (not on live page)
- logo.png — not used in header currently

Open decisions

- Scope: photos only vs include graphics?
- Face shots: auto-sharpen with review vs hands-off?
- Higher-res originals from Zach available?
- Approval workflow: Lucid only vs Zach sign-off?
- Preview -enhanced copies first vs in-place replace?

On-page inventory (25 files)

- hero-zach-prep.jpg — Hero desktop (face)
- hero-chef-desserts.jpg — Hero mobile
- hero-hibachi-event.jpg — Hero + Experiences
- cater-1.jpg — Hero accent
- hibachi-wtol.jpg — Services (face)
- trailer-branded-side.jpg — Services + Gallery
- cater-buffet.jpg — Services, Gallery, Contact
- in-home-chef-dining.jpg — Services
- photobooth-event.jpg — Services
